SET UP AND RULES FOR A 3-5 PLAYER GAME

SETUP

- Each player takes a Bidding Meeple, Board, and 20K in Currency Cards (3x 5K, 5x 1K)
- Place the remaining currency cards in reach
- Place the Turn Marker on the space that corresponds to the number of players
- Place a Stock Ticker on each stock's starting value (darkened circles)
- Shuffle the Company and Forecast Cards
- Find one of each of the six different stock cards in the Market Deck, shuffle them, and deal one to each player
- Players place this stock face-down in the Stock Portfolio spot of the player board
- Place extra cards back in the Deck, shuffle, and place it next to the board, face-down

The stock received in Set Up functions as any other purchased during the game.

The player who paid the most for their previous meal takes the First Player Token.

THE ROUND

The game is played over several rounds: it begins with the First Player and continues clockwise. At a Round's end, the First Player Token is passed to the next player on the left.

Each round consists of six phases:

1. Information Phase
2. Supply Phase
3. Demand Phase
4. Action Phase
5. Selling Phase
6. Movement Phase

1. INFORMATION PHASE

Each player receives a paired Company and Forecast Card which indicate the future movement of a stock's value.

- Deal one Company and one Forecast Card to each player; they look at them in secret
- Place one Company and one Forecast Card face-up on the board: this is public
- Pair any remaining Company and Forecast Cards in separate face-down piles

2. SUPPLY PHASE

In the Supply Phase, players place cards in Stockpiles to be bid on in the Demand Phase.

- Place a card from the Market Deck face-up in each Stockpile as per the number of players

- Deal two cards from the Market Deck to each player: **keep these separate from other cards**
- In turn order, each player places both of their cards in any Stockpile(s): one face-up and the other face-down

Spread the cards out so that all players can see how many and which cards are in each Stockpile.

3. DEMAND PHASE

Players now bid to acquire the Stockpiles.

- In turn order, each player places their Bidding Meeple on an open number of any Bidding Track, including tracks with bids already on them, **as long as the bid increases**

A player may not bid more money than they currently have. How much money a player has is public knowledge.

- If, and only if, a player is outbid by another player, the outbid player picks up their Meeple and re-bids on their next turn

The re-bid occurs only after all players have had the chance to bid once. If multiple players outbid each other, re-bids proceed in clockwise order. The re-bid may be placed on the same Track or a different one. If there are no further open spots on a Track, it is locked: the maximum bid is 25K. You cannot underbid or match another player's bid. A player may bid and pay \$0 for a Stockpile.

- Bidding continues until each Bidding Track has one Meeple on it

Forecast Cards

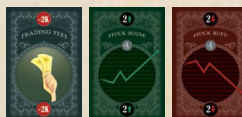

Start Player Token

Player Boards

Action Cards

- Players then pay the bank the amount of their bid, collect their Meeple, and take all the cards in the Stockpile they purchased
- If a player acquired a Trading Fee Card, they pay the amount shown then discard it

If a player cannot pay the Fee, they keep the card face-up in front of them. Fees must be paid immediately when able.

- Action cards are kept face-up.
- Place the other cards in the Stock Portfolio section of the Player Board, face-down

Stock cards are kept secret. A player may look at their own stocks at any time.

4. ACTION PHASE

In the Action Phase, players manipulate the markets using Action cards.

- In turn order, each player uses **all** their Action Cards, then discards them

Stock Boom! A player chooses a stock and moves the value up by two.

Stock Bust! A player chooses a stock and moves the value down by two.

A player **must** select one stock and increase or decrease its value. If a stock's value reaches the Stock Split or Bankruptcy space, follow the rules in the Movement Phase.

5. SELLING PHASE

Players may sell stock they own.

- In turn order, players **may** sell any number of stocks they own by discarding them and collecting money equal to the current value

Stocks sold from a Split Portfolio pay double the value of the stock. Players may move a stock from their Split Portfolio to their regular Portfolio to receive one times the current value of a stock. This represents selling only one stock from a Split stock.

6. MOVEMENT PHASE

Stock values move according to the Company and Forecast cards.

- In turn order, players reveal Company and Forecast Cards and move Tickers accordingly
- Move the remaining stock according to the paired Company and Forecast Cards on the board; all stocks are affected every round
- The **\$\$** Forecast Card means a company pays dividends at 2K for each stock share (double for Split Portfolio shares)

A player must reveal shares of stock to receive dividends, though they may choose not to reveal all of them to avoid showing how many shares they have.

STOCK SPLITS

If a stock's value increases over 10, the stock Splits, doubling the shares held. Players who have that stock in their portfolio reveal it and move it to their Split Portfolio, face-down.

- If the increase puts the value exactly on the Stock Split space, it is returned to 6
- If the increase moves the value further than the Stock Split space, reset to 6 and continue to increase the stock's value

Any of that stock acquired later in the game goes into a player's regular Portfolio, not the Split Portfolio.

- If a player has a stock in his Split Portfolio and that stock splits again, they receive 10K for each card of that type in their Split Portfolio

BANKRUPTCY

If a stock's value moves below 1, it immediately goes bankrupt and all players discard all stock of that kind that they own, in **both** Portfolios.

The stock's price Ticker returns to 5.

ROUND END

The Round ends after the Movement Phase.

If the Turn Marker is not yet on the right-most spot of the calendar, move it one space to the right and pass the First Player Token one player to the left, before starting another round.

Otherwise, proceed to Game End.

GAME END

Any cards left in the Market Deck are not used in this game.

- All players reveal the shares of stock they own in each company to determine the Majority Shareholders; Split Portfolio shares count double
- The Majority Shareholders of each company receive 10K; all tied players receive 5K
- All players then sell their shares at the price equal to the final value of the stock; again, Split Portfolios count double

Add up each player's Currency Cards, and the player with the most money wins.

In the case of a tie, the tied player who has the most Majority Shareholdings wins.

SET UP & RULES VARIATIONS FOR A 2 PLAYER GAME

SETUP Players start with 2 Bidding Meeples and 30K but still receive only one starting stock.

INFORMATION PHASE Each player gets two **separate** pairs of Company and Forecast Cards. The other two pairs are placed face-down next to the game board.

SUPPLY PHASE Place one card from the Market Deck face-up on the first four Stockpiles. Each player draws two cards from the Market Deck, places them (one up, one down), **then** draws two more cards and repeats.

DEMAND PHASE Players alternate bidding. All Meeples are placed before any re-bidding. A Meeple may not be placed on a Track with a same colour Meeple. Re-bidding alternates until all are on separate Tracks. A player may bid twice in a row. The combined bids may not exceed a player's money.
